

## The Next Evolution in Automated Retail

- Maximise income per m<sup>2</sup>
- Minimise high-value small item losses
- Remote monitoring at your own convenience

AutoAisle™ helps Retailers maximise their income per square meter while minimising the losses frequently associated with high-value small items. Automated retail solutions are gaining popularity as Retailers and other businesses look for new ways to serve customers better while maintaining inventory control and increase product ranges.

This solution is part of a broader strategy to re-imagine the traditional supermarket kiosk, creating a better way for Retailers to deliver high-value items while enhancing the consumer's in-store shopping experience and showcasing brands more effectively.

AutoAisle™ can be customised to suit individual store requirements. It can be integrated with the POS system where preferred. But there is also the option of utilising a non-integrated solution. The solution will work equally well with staffed or self-checkout POS systems.

AutoAisle™ gives the Retailer another channel to serve customers, complementing traditional retail and online. These solutions are going to be playing a much more important role as Retailers move into a truly omni-channel world, geared to providing what customers want in the way they want.

## AutoAisle™ Benefits

- Sales of high value items, anywhere
- Increase full range of products
- Linked to in-store Point of Sale (POS)
- One payment point; shorter queues at POS
- Mobile payment enabled
- Promotion of self-service
- Media channel for advertising
- Promoting shopper health & safety
- Remote monitoring
- Full user accountability & access control
- Full reporting suite
- Retailer chooses & buys product range
- Store stocks the products in machine
- Full Gross Profit goes to the store
- No theft
- Retail Display Ban compliant

## The range of kiosk possibilities

Our range of kiosks can be deployed in a multitude of sectors, including pharmaceutical; medicine collection; baby formula; batteries; wellness and petrol station forecourts.

### AutoAisle™ 24 Hour convenience

AutoAisle™ for Convenience is a 24-Hour solution for Forecourts. The system enables Retailers to expand their range of high value products without taking additional floor space and augment this with stock and payment security. Products are only released after payment is confirmed via the store POS system or mobile payment platform.

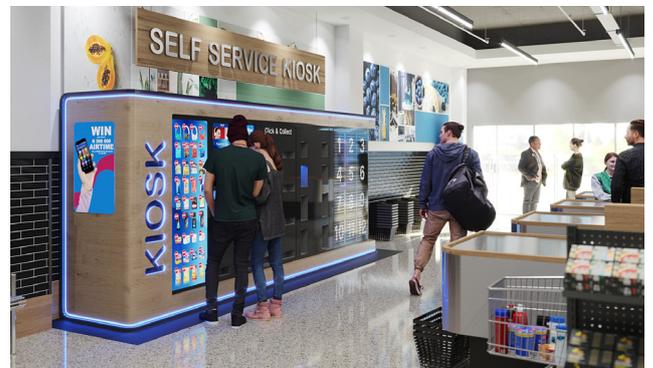

### AutoAisle™ for Pharma

AutoAisle™ for Pharma incorporates an automated click-and-collect solution and combines it with a merchandising solution that secures high value retail products in a pharma environment to boost sales. Patients with recurring scripts can choose their medication delivery location and then access it by scanning their phone.

### AutoAisle™ for Supermarket

Long queues, lack of inventory control and poor merchandising practices has led to many super-markets investigating NEO RS's Kiosk of the Future. Unstaffed and focused on self-service collection of high value fast moving consumer goods (FMCG) products such as medication, expensive shaving blades, infant formula, face creams and tobacco.

### AutoAisle™ for Tobacco

AutoAisle™ for Tobacco can be customised to suit individual store requirements. It can be integrated with the POS system where preferred. But there is also the option of having a non-integrated solution where the Retailer has enhanced security protocols on the POS. The solution will work equally well with staffed or self-checkout POS systems.

**BUSINESS CHALLENGE** - Tobacco products are a particularly tricky challenge for Retailers because the traditional solution of selling them from the kiosk at the front of the store creates a bottleneck at the tills, negatively impacting the shopping experience.

**SOLUTION** - An automated solution solves the problem, while delivering complete stock transparency and accountability.

## TOBACCO RETAIL DISPLAY BAN

Another key issue for Retailers is the likely ban on tobacco displays in the retail environment. New legislation is likely to make it illegal to have more than 1m<sup>2</sup> displays or it may ban displays completely. In many countries where similar regulations were enforced, Retailers were caught unprepared for the change.

Automation gives the Retailer another channel to serve customers, complementing traditional retail and online. One key benefit is that the inherent security of the dispensing system makes it possible for even smaller Retailers to carry a wide range of high-value items at reduced risk of shrinkage. The unit can be fully integrated into the retail value chain.

Automated solutions are going to be playing a much more important role as Retailers move into a truly omnichannel world, geared to providing what customers want in the way they want.

## AutoAisle™ cabinet features

- 24-hour Monitoring
- Industrial LCD Touch Screen
- Interactive Product Selection
- Management Screen
- QR Scanner
- Pin/Biometric Access Control
- Brand Hotspot
- Illuminated Exit Gate
- Proximity Beacon
- Full Reporting Suite
- Tamper Resistant
- Low Electricity Usage
